CORE
COMPETENCIES

PORTER'S FIVE FORCES

1. Threat of New Entrants: Moderate to High

- The sustainable fashion market in India is witnessing rapid growth, driven by increasing consumer awareness and demand for eco-friendly products. This trend is attracting new entrants, including both startups and established brands looking to diversify their offerings. The initial investment for sustainable materials and eco-friendly production processes can be substantial, but the relatively low barriers to entry in terms of brand loyalty and market saturation make it easier for new players to emerge.
- Established brands like OG & Co benefit from existing supply chains, brand recognition, and a commitment to sustainability that can create significant barriers for newcomers. However, the rise of online platforms has lowered the entry threshold for smaller brands that can leverage social media for marketing without substantial upfront costs.
- While many new entrants may focus on trendy designs or niche markets, they often overlook the importance of building a sustainable supply chain. Brands that fail to consider the long-term implications of sourcing materials responsibly may struggle to maintain credibility and consumer trust as sustainability becomes a more critical factor in purchasing decisions.

2. Bargaining Power of Suppliers: Moderate

- OG & Co sources materials such as hemp, bamboo, and organic cotton from suppliers who adhere to sustainable practices. The number of suppliers offering high-quality sustainable materials is growing, but specific certifications and quality standards can limit options. This situation gives suppliers moderate bargaining power; those with unique or highly sought-after materials can negotiate better terms.
- Additionally, as the demand for sustainable fabrics increases, suppliers may consolidate or raise prices, impacting OG & Co's cost structure. However, the growing awareness of sustainability has also led to an increase in innovative suppliers who are developing new eco-friendly materials, which may reduce dependency on a few key suppliers over time.
- OG & Co could explore partnerships with local farmers or cooperatives to cultivate sustainable raw materials. By investing in local supply chains, OG & Co could not only secure more favorable pricing but also enhance its brand story by supporting local economies and reducing carbon footprints associated with transportation.

3. Bargaining Power of Buyers: High

- Consumers are increasingly aware of sustainability issues and have access to a wide range of options when it comes to purchasing sustainable fashion. This heightened awareness gives buyers significant bargaining power; they can easily switch brands if they find better quality or pricing elsewhere. The rise of e-commerce has further empowered consumers by providing them with extensive information about brands and their practices.
- Additionally, social media platforms allow consumers to share their experiences and opinions about products widely, influencing others' purchasing decisions. This transparency means that OG & Co must continuously innovate and communicate its unique value proposition to retain customer loyalty.
- Though consumers are often driven by price and quality, there is a growing segment that values brand authenticity and transparency over mere product attributes. OG & Co could leverage this by sharing detailed stories about its sourcing practices, production processes, and the social impact of its operations, thereby fostering deeper connections with consumers who prioritize ethical consumption.

4. Threat of Substitute Products: High

- The threat of substitutes in the fashion industry is considerable due to the availability of fast fashion alternatives that offer lower prices and immediate availability. While these products may not be sustainable, they appeal to price-sensitive consumers who prioritize cost over environmental impact. Additionally, the popularity of second-hand clothing and thrift shopping is on the rise as consumers look for unique pieces while minimizing their environmental footprint.
 - Moreover, other forms of clothing such as rental services are gaining traction among environmentally conscious consumers who prefer access over ownership. This trend poses a challenge for traditional retail models like OG & Co's.
 - OG & Co could consider integrating a rental or resale model into its business strategy. By offering customers options to rent high-quality garments or facilitating a resale platform for pre-owned items, OG & Co could tap into the growing demand for sustainable consumption through the viral trend of "thrifting," while differentiating itself from competitors focused solely on direct sales.
-

5. Industry Rivalry: High

- The competitive landscape for sustainable fashion in India is intensifying as more brands enter the market and existing players expand their offerings. This rivalry is fueled by growing consumer demand for eco-friendly products and the increasing importance of sustainability in purchasing decisions. Established brands with strong marketing strategies pose a significant threat to OG & Co's market share.
 - Furthermore, many competitors are investing heavily in marketing campaigns that emphasize their sustainability credentials, making it essential for OG & Co to differentiate itself effectively. The presence of both domestic players and international brands adds further complexity to this competitive environment.
 - While many brands focus on product differentiation through design or marketing claims about sustainability, there is an opportunity for OG & Co to build community engagement around its brand values. By creating platforms for consumer interaction—such as workshops on sustainable living or collaborations with local artisans—OG & Co could foster brand loyalty that transcends traditional competitive metrics.
-

PESTEL ANALYSIS

Political

- **Make in India Initiative:** Launched in 2014, this initiative aims to enhance domestic manufacturing and attract foreign investment. It fosters a supportive environment for local production, potentially lowering costs and enhancing market access for OG & Co.
- **Amended Technology Upgradation Fund Scheme (ATUFS):** This scheme provides financial assistance to textile manufacturers adopting modern, sustainable technologies. OG & Co can leverage this funding to invest in eco-friendly production processes, improving quality and competitiveness.
- **Sustainable Resolution (SU.RE):** This initiative promotes sustainability within the fashion industry through eco-friendly practices and responsible sourcing. It aligns with OG & Co's mission, enhancing brand reputation, although compliance may require significant investment.
- **Environmental Regulations:** Anticipated stricter environmental regulations will focus on waste management and resource efficiency in the textile sector. These regulations favor OG & Co's sustainable practices but may impose compliance costs.
- **Foreign Direct Investment (FDI) Policies:** The Indian government allows 100% FDI in textiles to encourage international investment. This opens opportunities for partnerships that could benefit OG & Co, while also increasing competition from foreign brands.

Economic

- **Growth in Household Income:** By 2031, it is projected that 11.3 crore new households in India will have an annual income of over ₹30 lakh (approximately \$36,000), reflecting a significant increase in affluent households. Additionally, the number of middle-class households (earning between ₹5 lakh to ₹10 lakh annually) is expected to grow by 28.3 crore during the same period. This rising income level enhances the potential customer base for OG & Co, allowing for greater discretionary spending on sustainable fashion.
- **Consumer Spending on Fashion:** The Indian fashion market is expected to reach \$100 billion by 2025, with a notable shift towards premium and luxury segments, including sustainable fashion. As disposable incomes rise, consumers are increasingly willing to invest in higher-quality, ethically produced clothing, aligning with OG & Co's offerings.
- **Streetwear Industry Growth:** The streetwear segment in India has been rapidly expanding, driven by youth culture and social media influence. As of 2024, the streetwear market is projected to grow at a CAGR of 15%, indicating a strong demand for trendy and sustainable streetwear options. OG & Co can capitalize on this trend by incorporating streetwear styles into its product line.

Sociocultural

- **Fusion of Traditional and Contemporary Styles:** The current fashion landscape in India is characterized by a blending of traditional and contemporary styles. Many consumers are increasingly drawn to garments that incorporate traditional Indian textiles and motifs within modern silhouettes. This trend reflects a desire to celebrate cultural heritage while embracing contemporary aesthetics, creating a unique niche for brands that can successfully merge these elements.
 - **Rise of Individualism:** There is a notable shift towards individualism in fashion, with consumers seeking to express their personal identities through their clothing choices. This trend has led to an increased demand for unique and customizable fashion items. Consumers are moving away from mass-produced clothing, favoring pieces that reflect their individuality and personal style.
 - **Environmental Awareness:** There is a heightened awareness of environmental issues among consumers, leading to increased demand for sustainable products. As discussions around climate change and ecological impact become more prevalent, many individuals are actively seeking brands that demonstrate a commitment to sustainability. This trend reflects a broader societal shift towards responsible consumption.
-

Technological

- **Eco-Friendly Material Selection:** The use of sustainable materials such as organic cotton, hemp, and bamboo is crucial for minimizing environmental impact. These materials require fewer resources compared to conventional fabrics, with organic cotton cultivated without synthetic pesticides or fertilizers.
 - **Supply Chain Transparency:** There is a growing demand for accountability regarding the sourcing and production processes behind clothing. Collaborating with suppliers who adhere to ethical and environmentally responsible practices enhances OG & Co's brand reputation and consumer trust.
 - **Efficient Production Methods:** Technological advancements such as 3D printing and digital pattern-making enable on-demand manufacturing, which reduces excess inventory and minimizes waste. This allows brands to produce customized garments that meet specific consumer needs while maintaining sustainability standards.
 - **Eco-Friendly Dyeing Techniques:** The development of low-impact dyeing methods, such as natural dyes or waterless dyeing technologies, helps reduce the environmental impact of the dyeing process, aligning with OG & Co's commitment to sustainability.
-

Environmental

- **Sustainable Initiatives:** Initiatives like the Charter for Water Recycling & Pollution Prevention in Textile Industries aim to promote sustainable practices by encouraging industries to implement zero liquid discharge systems and improve wastewater management.
 - **Environmental, Social, and Governance (ESG) Standards:** Increasing emphasis on ESG standards presents both opportunities and challenges. Compliance with stringent regulations is essential for maintaining market access, particularly in international markets sensitive to sustainability issues.
 - **Consumer Demand for Sustainability:** As consumers become more environmentally conscious, there is a growing demand for brands that demonstrate a commitment to sustainability. This trend aligns well with OG & Co's focus on using organic materials like hemp and bamboo.
-

Legal

- **Environment Protection Act, 1986:** This act provides a framework for the protection and improvement of the environment in India. It mandates that industries, including textiles, comply with environmental standards set by the government. For OG & Co, adherence to this act is essential to avoid penalties and ensure sustainable practices in its manufacturing processes.
 - **The Textile (Processing) Industry (Regulation) Act, 2002:** This act regulates the processing of textiles to minimize environmental impact. It requires textile manufacturers to obtain licenses and adhere to prescribed standards for effluent discharge. Compliance with this act is crucial for OG & Co to operate legally and maintain its commitment to sustainability.
 - **Corporate Social Responsibility (CSR) Regulations:** Under the Companies Act, companies meeting certain profitability thresholds are required to engage in CSR activities. For OG & Co, this requirement presents an opportunity to align its sustainability efforts with community welfare initiatives, enhancing its brand reputation while fulfilling legal obligations.
-

FACTORS OF PRODUCTION

BASIC FACTORS OF PRODUCTION:

LAND:

1. E-COMMERCE PLATFORM:

Consists of the digital assets such as the website and app and mainly the digital land in which the company operates.

2. WAREHOUSING UNITS:

This consists of the inventory storage locations, optimized for the company.

3. POP-UP STORES :

Consists of the physical stores for occasional exhibition pop-up stands to increase brand awareness.

LABOUR:

1. PRODUCTION STAFF:

Consists of skilled workers engaged in producing the casual street wear clothes from sustainable materials.

2. WEB DEVELOPERS:

Consists of web specialists who take care of the back-end work and ensure a good user experience.

3. Fashion designers that come up with creative designs

4. Other staff such as pop-up staff, digital marketing team, customer service and logistics staff.

CAPITAL/MACHINERY:

1. Technological tools and infrastructure required for different operations such as Customer Relationship Management, Logistics and app development

2. Production equipment

3. Sustainable, Recycling Machines

ENTREPRENUERSHIP/MANAGEMENT:

1. Professional leadership

2. Strategic partnerships (with pop-up event organizers, Indian Olympic association)

FACTORS OF PRODUCTION

ADVANCED FACTORS OF PRODUCTION:

INTELLECTUAL PROPERTY:

1. Brand Trademarks:

The company has registered itself with a unique name-OG and Co which cannot be replicated

2. Logo:

OG and Co have its own logo which can only be used by this company

3. Clothes designs:

They have certain designs for street wear that can't be significantly replicated

ORGANISATIONAL ARCHITECTURE:

1. Online-first oriented: They are more into digital operations with occasional pop-ups

2. Good Customer responsiveness

3. Sustainability oriented partnerships with suppliers and manufacturers.

PROCESS KNOWLEDGE:

1. Material innovation knowledge

2. Creative Designs

3. Sustainable operations

4. Efficient pop-up logistics

HOW DO THESE RESOURCES LEAD TO COMPETITIVE ADVANTAGE?

1. SUPERIOR EFFICIENCY:

- Through increased employee productivity and capital productivity, OG and CO can leverage its resources to increase its efficiency.
- The company can source its resources and raw materials in bulk to reduce costs.
- **LEARNING EFFECTS AND EXPERIENCE:** With OG and co increasing its experience with sustainable materials, it can achieve learning effects, thereby streamlining its processes and effectively reducing its costs.
- **MASS CUSTOMISATION:** Offering sustainable and more eco-friendly products, OG and Co can cater to customized clothing for its customers.
- **MARKETING STRAETGY:** The company can highlight its sustainable oriented street style features through its marketing strategy leading to a better position compared to its rivals.

2. SUPERIOR QUALITY:

- **TOTAL QUALITY MANAGEMENT:** The company can ensure high quality products so that brand loyalty increases.
- **QUALITY IMPROVEMENT:** By using six sigma methodologies, the company can improve its manufacturing process to reduce defects and ensure higher quality products.

3. SUPERIOR INNOVATION:

- **PRODUCT INNOVATION:** By ensuring high quality, sustainable and eco-friendly street style and casual wear, OG and CO can add more value to its customers which allows them to increase prices
- **PROCESS INNOVATION:** By using efficient equipment to deal with recyclable and eco-friendly materials, they can reduce their costs.

4. SUPERIOR CUSTOMER RESPONSIVENESS:

- By ensuring a customer centric approach to build strong customer relations
- Increasing their attention towards their response time to customers and other factors such as leadership connects, where the founders interact with the customers, through social media by using story telling.

VALUE CHAIN ANALYSIS

1. Analyse Each Function: Efficiency and Effectiveness

Primary Activities

1. Inbound Logistics: OG and Co sources its unique sustainable materials such as bamboo, hemp and beechwood. Their inbound logistics focus on establishing partnerships with suppliers who can consistently deliver high-quality, eco-friendly raw materials. This includes direct procurement from farms and manufacturers that align with their sustainability mission.
2. Production: OG and Co's manufacturing process incorporates energy-efficient machinery, water-saving practices, and waste reduction methods. For example, the brand uses advanced cutting techniques to minimize fabric waste and reduces emissions during production.
3. Outbound Logistics: The brand uses a combination of e-commerce and selective retail partnerships to distribute its products. The brand uses sustainable packaging options made from recycled materials, further aligning with their environmental mission.
4. Marketing and Sales: OG and Co markets itself as a high-street fashion brand with a focus on sustainability and ethical practices. Through targeted campaigning, they educate customers about the environmental benefits of choosing eco-friendly materials. The brand uses digital marketing to reach eco-conscious consumers, with a strong presence on platforms like Instagram, where it showcases its products.
5. After-Sales Service: The brand offers post-purchase support to ensure customers are satisfied with their purchases. This includes providing care instructions for sustainable garments and offering repair services to extend product life.

Secondary Activities:

1. Firm Infrastructure: OG and Co has a well-defined organizational structure, with a strong leadership team dedicated to sustainability. The brand's focus on transparency and ethical practices is integrated into its core leadership values.
 2. Human Resources Management: OG and Co has employees who are passionate about sustainability and ethical production. Its work culture empowers employees to contribute to innovation and process optimization. Employees receive ongoing training on sustainable practices, product knowledge, and customer engagement. This ensures that the staff can effectively communicate OG and Co's eco-friendly message and maintain high standards in product quality and customer service.
 3. Technology Development: The brand invests heavily in research and development to create innovative, sustainable materials like bamboo, orange peel, beechwood and hemp. This differentiates OG and Co from competitors and helps attract a niche market of eco-conscious consumers.
-

BENCHMARKING VS OTHER COMPANIES IN THE SAME INDUSTRY:

Factors	OG and Co	Doodlage	No Nasties	Takeaways
Sustainability in Sourcing	Uses eco-friendly materials like bamboo, milk fibres, and orange peel. Focuses on ethical sourcing and transparency .	Uses post-consumer waste, industrial surplus fabric, and upcycled materials. Focus on waste reduction.	Uses organic cotton and environmentally friendly dyes. Focuses on a 100% organic supply chain.	All brands emphasize sustainable sourcing, but Doodlage stands out for its focus on upcycling and zero-waste sourcing, offering a unique value proposition.
Brand Image and Market Position	Strong brand identity focused on high-street sustainable fashion with eco-friendly messaging.	Aims at eco-conscious consumers with a unique angle on recycling and upcycling.	Known for its commitment to organic cotton and eco-friendly production.	OG and Co is positioned in the high-street fashion niche, offering premium products. Both Doodlage and No Nasties have a more distinct focus on upcycling and organic materials.
Operational Efficiency	Implements lean manufacturing techniques, reduces waste, and has a strong focus on transparent supply chains.	Works with local tailors and artisans, focusing on ethical practices and low-waste production.	Efficient use of organic cotton with a streamlined supply chain. Known for its simple, transparent operations.	OG and Co focuses on lean manufacturing while Doodlage relies on localized production. No Nasties excels in simplicity and transparency.
Product Diversity and Range	Offers a wide range of high-street fashion products, including athleisure and casual wear.	Limited range with a focus on upcycled fashion and unique, artistic designs.	Primarily focuses on simple, organic cotton clothing with a limited collection.	OG and Co has a broader product range, which gives it an advantage in terms of market segmentation. Doodlage focuses on niche upcycled designs, while No Nasties stays simple and classic.

Marketing Strategy	Uses influencer marketing, sustainable fashion campaigns, and digital storytelling.	Relies heavily on eco-conscious messaging, workshops, and hands-on community engagement.	Focuses on organic certification and sustainable product messaging through blogs and social media.	OG and Co uses modern digital marketing strategies, while Doodlage and No Nasties use community-based and niche-targeted marketing.
---------------------------	---	--	--	---

BENCHMARKING AGAINST BEST-IN-CLASS COMPANIES IN OTHER INDUSTRIES:

Factors	OG and Co (Fashion Industry)	Tesla (Automotive Industry)	Patagonia (Outdoor Apparel Industry)	Takeaway
Sustainability in Materials	Focus on sustainable materials (e.g., bamboo, beechwood and hemp).	Tesla's use of sustainable materials like recyclable aluminium and zero-emission vehicles.	Patagonia uses recycled polyester, organic cotton, and wool in its products.	OG and Co can focus more on increasing the recyclability of materials like packaging or garment components.
Technology and Innovation	Innovation in sustainable fabrics and designs like the Garden of Eden athleisure line.	Tesla leads in electric vehicle tech, self-driving software, and energy storage.	Patagonia uses cutting-edge textile technologies and innovation for reducing waste in production.	OG and Co can increase investment in R&D to create new sustainable fabrics and enhancing the product lifecycle and incorporating technology into fashion, like smart textiles.
Supply Chain Management	Lean and efficient supply chain with eco-friendly partners.	Tesla has a vertically integrated supply chain, reducing dependency on suppliers.	Patagonia works directly with its suppliers to ensure sustainability in every aspect of production.	OG and Co can optimize supply chain processes by long-term relationships with sustainable suppliers and looking into more control over their production processes.
Brand Image and Marketing	Focused on eco-conscious consumers through social media and transparent marketing.	Tesla is a market leader in sustainability messaging, driving eco-consciousness in the automotive industry.	Patagonia uses strong environmental activism in its marketing campaigns (e.g., "Don't Buy This Jacket" campaign).	OG and Co can expand its marketing strategy to emphasize not just sustainability but also social activism, creating deeper brand loyalty among its audience.

Customer Engagement	After-sales services include care instructions and a garment recycling program.	Tesla engages customers through software updates, constant feedback loops, and brand loyalty.	Patagonia encourages customers to repair and reuse their gear through the Worn Wear program.	OG and Co can build more customer-centric programs personalized sustainability journeys for customers to track their eco-impact.
Transparency	High level of transparency in sourcing and production methods.	Tesla publishes regular reports on environmental impact and sustainability targets.	Patagonia is known for its transparency, offering detailed information on the supply chain and labour conditions.	OG and Co should continue improving transparency by using technologies to provide more traceable, real-time insights into the production and sourcing processes.

OPPORTUNITIES FOR IMPROVEMENT USING METHODOLOGIES

OG and Co can improve by:

- Strengthen supplier partnerships and reduce costs of sustainable materials.
 - Optimize production costs without compromising ethical standards
 - Explore cost-effective, carbon-neutral shipping methods.
- Leverage data analytics for personalized marketing strategies.
- Enhance post-purchase recycling or repair programs to improve customer loyalty.

OG and Co can implement methodologies like:

1. Six Sigma: the brand can use the DMAIC framework to analyse material waste during production. For example, track how much fabric is wasted during cutting and sewing, then identify inefficiencies in techniques or equipment.

2. Lean: Og and Co can conduct a Lean audit to identify redundant steps in supplier coordination or excessive inventory levels, focusing on streamlining communication and material flow.

3. Kaizen: the brand can establish daily or weekly improvement meetings with production teams to encourage small, continuous changes like better fabric handling techniques or faster packaging workflows and set up suggestion boxes or digital platforms where employees can contribute ideas for process optimization.

4. Value Stream Mapping (VSM): they can map the entire production process, from raw material sourcing to product delivery, identifying problems such as supplier delays or inefficient shipping routes and create a future-state map to remove non-value-adding activities

Measure, Reward, and Take Corrective Actions

- Measure: the brand must monitor KPIs, customer retention rate, supply chain efficiency, and cost-to-revenue ratios. Also use environmental impact metrics like carbon footprint reduction and water savings.
- Reward: they must incentivize employees for achieving sustainability milestones like bonuses for waste reduction targets.
- Corrective Actions: the brand must address problems in material sourcing through better supplier agreements. Adjust marketing strategies based on customer feedback for improved engagement.

CORE COMPETENCIES

1. Sustainability and Ethical Practices

OG and Co's focus on using sustainable materials like bamboo, beechwood, orange peel and hemp sets it apart from many other fashion brands. The company places a strong emphasis on eco-friendly sourcing and production processes. This competency allows them to target a growing market of environmentally-conscious consumers.

2. Product Innovation

The brand constantly innovates by introducing products which combine comfort, sustainability, and style. Their innovative use of sustainable materials creates a unique selling proposition in the marketplace. OG and Co offers exclusive, high-quality products that appeal to fashionable yet environmentally-conscious consumers. This positions them as an innovative player in the sustainable fashion sector.

3. Brand Positioning and Customer Loyalty

OG and Co. has positioned itself as a high-street fashion brand with a strong sustainability ethos. It builds brand loyalty by maintaining a transparent communication strategy, engaging with customers on platforms like social media, and offering sustainability-driven messaging. This competency helps create a loyal customer base that values both style and ethics.

4. Operational Efficiency

OG and Co has adopted lean manufacturing practices and works with sustainable supply chain partners to ensure that production processes are both efficient and low-waste. The brand's streamlined operations help it maintain quality while minimizing environmental impact.

5. Customer Engagement and After-Sales Services

OG and Co. provides after-sales services, such as care instructions for sustainable garments and garment recycling programs. They actively engage with customers. This competency deepens customer relationships and enhances brand loyalty, creating a more engaged customer base that appreciates the brand's eco-conscious approach.
